GoLo Ai — Merchant AI Growth Intelligence

Future Integration Blueprint & Implementation Roadmap

Prepared by NexaPrime AI Team | Confidential | October 2026

■ 1. Executive Summary

GoLo is a hyper-local e-commerce and retail discovery platform that connects merchants with shoppers in their neighborhood. The GoLo AI Assistant is currently deployed as an intelligent merchant support guide — answering FAQs, guiding platform navigation, and routing escalations to customer service.

This document outlines the **next evolution**: transforming the AI Assistant from a reactive FAQ responder into a **proactive Merchant Growth Intelligence Engine**. The enhanced AI will analyze merchant data, buyer behavior, market trends, and seasonal demand to actively guide merchants in growing their revenue, increasing product visibility, and optimizing their business strategy on the GoLo platform.

Dimension	Current State	Future State
Role	Reactive FAQ assistant	Proactive growth advisor
Data Used	Static FAQ knowledge base	Live merchant data + market signals
Output	Text answers to queries	Personalized revenue-growth recommendations
Frequency	On-demand (per query)	Real-time + scheduled daily insights
Integration	Standalone AI widget	Embedded in Merchant Dashboard

■ 2. Vision: Merchant Growth AI

The vision is a **Merchant AI Co-Pilot** — an always-on AI engine that sits inside the GoLo Merchant Dashboard and proactively tells each merchant:

- "Your revenue dropped 18% this week vs last week — here's why and what to do."
- "Your top competitor in Pune Electronics is running a 25% off sale — consider a targeted voucher."
- "Your best-selling product (Bluetooth Earbuds) has low stock — restock in the next 3 days."
- "You've had 42 abandoned carts this week — activate a follow-up voucher campaign to recover ■18,400."
- "Festival season is 12 days away — merchants in your category earned 3.2× more last Diwali."

This is not about answering questions. This is about **telling merchants what to do** before they even know they need to ask.

■ 3. Core AI Functionalities to Build

3.1 Revenue & Sales Intelligence

- Daily and weekly revenue trend analysis with percentage change alerts
- Top and bottom performing products ranked by revenue, units sold, and margin
- Revenue recovery recommendations for abandoned carts and unpaid orders
- Hourly and daily peak traffic analysis — when are most orders placed?
- Revenue forecasting for the next 7 / 30 days based on seasonal patterns
- Comparison against similar merchants in the same category and geography

3.2 Product & Catalog Optimization

- AI-detected gaps: products in demand locally that the merchant has not listed
- Low-performing listing diagnosis: poor images, missing descriptions, uncompetitive pricing
- Pricing strategy suggestions: dynamic pricing based on demand signals
- Variant recommendations: "Merchants selling this product with 3+ size variants earn 2.4× more"
- Bundle suggestion engine: which products to bundle to increase average order value
- SEO-optimized product title and description generator using LLM

3.3 Voucher & Promotion Intelligence

- Voucher performance analytics: which vouchers drive highest ROI
- Predictive voucher campaign planner for festivals, weekends, and local events
- Geo-targeted promotion recommendations: reach customers within X km radius
- QR voucher scan analytics: where are vouchers being redeemed?
- Campaign A/B test results: voucher A vs voucher B click-through and redemption rates
- Auto-suggest optimal discount percentage without hurting margin

3.4 Customer & Buyer Intelligence

- Customer lifetime value (CLV) analysis per top buyer segment
- Repeat vs one-time buyer ratio — and actions to improve loyalty
- Buyer location heatmap: where are most customers coming from?
- Product affinity analysis: what do customers buy together?
- Churn prediction: customers who have not ordered in 30+ days with re-engagement prompts
- Sentiment analysis on product reviews — auto-flag negative reviews for action

3.5 Competitive Intelligence

- Monitor peer merchants in the same category and area
- Alert when a nearby competitor runs a promotion or drops their price
- Share-of-search tracking: which merchants appear most in local buyer searches?
- Category benchmark: how does this merchant compare to top 10% in revenue per month?
- White-space opportunity detection: underserved product categories nearby

3.6 Inventory & Logistics Intelligence

- Low-stock prediction: alert 5–7 days before a best-seller runs out

- Dead-stock identification: products that have not sold in 30+ days
- Reorder quantity recommendation based on sell-through rate
- Delivery time intelligence: which courier partners are fastest in this pin code?
- Return pattern analysis: which products have highest return rates and why?

3.7 Financial & Payout Intelligence

- Real-time payout forecast: when will the next settlement arrive and for how much?
- Commission and fee breakdown: what GoLo platform fees are being charged?
- Net margin calculator per product — after platform fees, courier costs, GST
- GST filing reminder and auto-summary of taxable supplies for the month
- Cash flow projection for next 30 and 90 days

3.8 Personalized Daily Briefing

- Every morning at 9 AM: AI pushes a personalized "Today's Merchant Brief" inside the dashboard
- Yesterday's sales summary, top-selling product, revenue vs target
- One action item: the single most impactful thing the merchant can do today
- Upcoming events / festivals relevant to their category in next 14 days
- A motivational benchmark: "You're in the top 20% of Electronics merchants this week!"

■■ 4. Data Requirements

For the Merchant Growth AI to work accurately, the following data streams must be connected to the AI engine:

Data Category	Data Fields	Source System	Update Frequency
Sales & Orders	Order ID, product, qty, amount, status, timestamp	GoLo Orders DB	Real-time
Product Catalog	SKU, title, price, category, images, description, stock	GoLo Catalog DB	On change
Buyer Behavior	Search queries, clicks, add-to-cart, purchases, reviews	GoLo Analytics Event Stream	Real-time
Voucher Data	Voucher ID, type, discount %, clicks, redemptions, revenue impact	GoLo Promotions DB	Hourly
Payout & Finance	Settlement amount, fee breakdown, GST, payout date	GoLo Finance DB	Daily
Merchant Profile	Category, location, tier, registration date, store rating	GoLo Merchant DB	On change
Competitor Data	Peer merchant IDs, category, pricing, promotions (anonymized)	GoLo Internal Analytics	Daily
Market Signals	Search trends, category demand, seasonal events	Google Trends API / Internal	Daily
Inventory	Stock levels, restock dates, supplier info	GoLo Inventory DB	Real-time
Customer Base	Repeat rate, CLV, location, last order date	GoLo CRM / Analytics	Daily

■ 5. Recommended APIs & External Services

5.1 AI / LLM APIs

API / Service	Purpose	Recommended Plan	Estimated Cost
Google Gemini 2.0 Flash	Generative insights, briefing text, product descriptions	Google AI Studio / Vertex AI	~$0.075 / 1M input tokens
Google Gemini 2.0 Pro	Deep financial analysis, complex multi-step reasoning	Vertex AI Enterprise	~$1.25 / 1M tokens
OpenAI GPT-4o	Fallback LLM for redundancy	OpenAI Platform Tier 3	~$5.00 / 1M tokens

Anthropic Claude 3.5 Sonnet	Long-context merchant data analysis	Anthropic API	~$3.00 / 1M tokens
Google Vertex AI Embeddings	Semantic product and query matching	Vertex AI	~$0.025 / 1M tokens

5.2 Data & Analytics APIs

API / Service	Purpose	Plan
Google Trends API (Unofficial / SerpAPI)	Category and keyword demand trends	SerpAPI $50/mo
Google Maps Platform — Places API	Geo-targeting, pin code demographics, footfall data	Pay-per-use ~$17/1000 req
Razorpay Analytics API	Payment success rates, refund patterns	Free with Razorpay account
Shiprocket / Delhivery API	Delivery SLA benchmarks, pin code coverage	Partner API (free)
GST Suvidhaa / ClearTax API	GST computation, filing reminders	~■5,000/year
Firebase Realtime DB / Firestore	Store real-time AI recommendation state	Blaze plan ~$0.06/GB/month
Redis Enterprise Cloud	High-speed caching for AI recommendations	Free tier → $7/mo paid
PostgreSQL (Supabase / Neon)	Persistent storage of merchant analytics data	Free → $25/mo

5.3 Notification & Communication APIs

API / Service	Purpose	Cost
Firebase Cloud Messaging (FCM)	Push notifications for daily merchant brief + alerts	Free
Twilio WhatsApp Business API	WhatsApp alerts for revenue drops, stock-outs, payouts	~$0.005/message
SendGrid / AWS SES	Email campaigns and weekly merchant digest	Free → $20/mo
MSG91 / Textlocal	SMS alerts for Indian merchants (OTP + alerts)	~■0.15–0.25/SMS

■■ 6. Step-by-Step Implementation Plan

Phase 1 — Data Infrastructure (Weeks 1–4)

- Step 1: Audit all existing GoLo databases (Orders, Catalog, Payments, Customers, Inventory)
- Step 2: Design a unified Merchant Analytics Data Warehouse schema (star schema with merchant_id as key)
- Step 3: Build ETL pipelines to ingest all data streams into a central PostgreSQL / BigQuery warehouse
- Step 4: Set up Redis cache layer for high-frequency data (last 24h orders, current stock levels)
- Step 5: Set up Google Pub/Sub or Kafka event stream for real-time order and behavior events
- Step 6: Data validation and quality checks — deduplicate, normalize, and anonymize where needed
- Step 7: Set up API gateway (e.g., FastAPI microservice) to expose structured merchant data to the AI engine

Phase 2 — AI Engine Development (Weeks 5–8)

- Step 1: Extend existing GoloRAGEngine (TF-IDF + Gemini) to a multi-tool AI Agent architecture
- Step 2: Build specialized AI "tools" / agents for each domain: Sales, Products, Vouchers, Finance, Inventory
- Step 3: Implement LangChain / LangGraph OR Google Vertex AI Agent Builder for tool orchestration
- Step 4: Connect Gemini 2.0 Flash API with structured prompts that inject merchant-specific data context
- Step 5: Build the Recommendation Engine: rule-based triggers + LLM-generated action text
- Step 6: Build the Daily Briefing generator: scheduled Gemini API call at 8:30 AM with merchant data snapshot
- Step 7: Implement confidence scoring on each recommendation — only surface high-confidence insights
- Step 8: Add explanation layer: every AI recommendation must include "why" with supporting data

Phase 3 — Dashboard Integration (Weeks 9–12)

- Step 1: Design the "AI Co-Pilot" UI panel inside the GoLo Merchant Dashboard (separate from the support chat)
- Step 2: Build the Today's Insight card: daily briefing, revenue summary, single action item
- Step 3: Build the Revenue Intelligence page: revenue charts, product performance, forecasts
- Step 4: Build the Product Optimizer page: AI suggestions per product with one-click actions
- Step 5: Build the Voucher Planner page: AI campaign suggestions with ROI estimates
- Step 6: Build the Customer Insights page: CLV, churn, loyalty segment breakdown
- Step 7: Implement real-time notification system: push + WhatsApp + email for critical alerts
- Step 8: A/B test the AI recommendations — measure revenue lift for merchants using AI vs not

Phase 4 — Personalization & Learning (Weeks 13–16)

- Step 1: Implement merchant feedback loop — "Was this recommendation helpful?" stored and used for fine-tuning
- Step 2: Build merchant segmentation model: tier merchants by category, revenue, engagement
- Step 3: Implement collaborative filtering: "Merchants like you who did X earned Y% more"
- Step 4: Build a fine-tuning dataset from successful GoLo merchant growth case studies

• Step 5: Fine-tune Gemini or an open-source LLM (Llama 3.1) on GoLo-specific merchant data
• Step 6: Launch merchant success tracking dashboard — show revenue lift attributed to AI recommendations
• Step 7: Onboarding AI coach: for new merchants, a 30-day guided growth program with daily AI tasks

■■ 7. Recommended Technical Architecture

Layer	Technology	Purpose
Data Ingestion	Apache Kafka / Google Pub/Sub	Real-time event streaming (orders, clicks, stock)
Data Warehouse	PostgreSQL + Google BigQuery	Historical analytics and batch processing
Cache Layer	Redis	Hot data: last 24h orders, stock levels, active campaigns
AI Orchestration	LangGraph / Vertex AI Agent Builder	Multi-step AI agent with specialized tools
LLM	Google Gemini 2.0 Flash + Pro	Insight generation, briefings, product copy
Embeddings	Vertex AI Embeddings / text-embedding-004	Semantic product and query matching
Backend API	FastAPI (Python)	Expose all AI endpoints to the frontend
Frontend	React.js / Next.js + Tailwind CSS	Merchant Dashboard UI with AI Co-Pilot panel
Notifications	FCM + Twilio WhatsApp + SendGrid	Push, WhatsApp, Email alerts
Auth	Firebase Auth / GoLo existing SSO	Merchant identity and session management
Deployment	Google Cloud Run / GKE	Scalable serverless container deployment
Monitoring	Google Cloud Monitoring + Sentry	AI accuracy, latency, and error tracking

■ 8. Example AI Prompt Templates (for Gemini Integration)

The following are example system prompt templates that will be injected with live merchant data and sent to the Gemini API to generate personalized insights:

8.1 Daily Revenue Briefing Prompt

```
System: You are the GoLo Merchant AI Co-Pilot. Generate a concise, motivating, and data-driven daily briefing for this merchant. Highlight revenue trends, top product, one critical issue, and one priority action for today. Merchant Data: {merchant_name}, Category: {category}, Location: {city} Yesterday Revenue: ■{yesterday_revenue} (vs ■{last_week_same_day} last week, {pct_change}%) Top Product: {top_product} ({top_units} units, ■{top_revenue}) Low Stock Alert: {low_stock_products} Upcoming Event: {next_festival} in {days_to_festival} days Generate: [Title] [2-sentence summary] [1 Action Item] [1 Motivational benchmark]
```

8.2 Product Optimization Prompt

```
System: You are a product catalog optimization expert for GoLo merchants. Analyze this product and return 3 specific, actionable improvements with expected impact. Product: {product_title} Current Revenue: ■{monthly_revenue}, Units Sold: {units_sold}/month Images: {image_count} uploaded, Quality Score: {image_quality_score}/10 Description Length: {desc_chars} characters Competitor Average Price: ■{competitor_avg_price}, This Product: ■{product_price} Return Rate: {return_rate}%, Avg Rating: {avg_rating}/5 Return: [Issue 1 + Fix + Expected Impact] [Issue 2 + Fix] [Issue 3 + Fix]
```

8.3 Voucher Campaign Suggestion Prompt

```
System: You are a promotional strategy advisor for GoLo local merchants. Recommend the optimal voucher campaign for this merchant right now. Merchant Category: {category}, City: {city} Last Voucher Performance: {last_voucher_roi}% ROI, {last_redemptions} redemptions Upcoming Events: {upcoming_events} Current Avg Order Value: ■{avg_order_value} Cart Abandonment Rate: {cart_abandonment_rate}% Competitor Promotions Active: {competitor_promotions} Return: [Campaign Type] [Discount %] [Target Segment] [Duration] [Expected ROI] [Rationale]
```

■ 9. Success Metrics & KPIs

Metric	Baseline (Current)	Target (6 months)	Measurement Method
Merchant Revenue Lift (AI users vs non-AI)	—	+18–25%	A/B cohort analysis
Daily Active Merchants using AI Co-Pilot	0%	65%+ of active merchants	Dashboard DAU analytics
Recommendation Click-Through Rate	—	>40%	UI event tracking
Recommendation Acceptance Rate	—	>28%	Action completion tracking
Support Ticket Reduction	Baseline	–45%	Helpdesk ticket volume
Merchant Churn Rate (12-month)	Baseline	–20%	Merchant retention cohort
Average Revenue per Merchant / Month	Baseline	+30%	Finance DB analytics
Voucher Campaign ROI (AI-suggested)	—	3.5× vs manual	Promotion analytics
Daily Briefing Open Rate (Push/Email)	—	>55%	FCM / SendGrid analytics
AI Response Latency (insight generation)	—	<2 seconds	API response time monitoring

■■ 10. Risks & Mitigation Strategies

Risk	Likelihood	Impact	Mitigation
AI gives inaccurate revenue recommendation	Medium	High	Confidence threshold gate — only surface >85% confident insights; always show underlying data
Merchant data privacy breach	Low	Critical	Data anonymization, end-to-end encryption, DPDPA 2023 compliance, no cross-merchant data leakage
LLM API rate limit or downtime	Medium	Medium	Multi-LLM fallback chain: Gemini → OpenAI → local deterministic model
Merchants distrust AI recommendations	Medium	High	Always explain "why" with actual data; show case studies from similar merchants; let merchant rate each insight

Data freshness lag affects accuracy	Medium	Medium	Real-time Pub/Sub for critical events; max 1-hour lag SLA on all data pipelines
High LLM cost at scale	Low	Medium	Cache repeated insights; use Gemini Flash (cheap) for briefings; only use Pro for complex analysis

■ 11. Estimated Timeline & Cost

Phase	Duration	Team Required	Estimated Cost
Phase 1: Data Infrastructure	4 weeks	1 Data Engineer + 1 Backend Dev	■2.5–4L
Phase 2: AI Engine Dev	4 weeks	1 AI/ML Engineer + 1 Backend Dev	■3–5L
Phase 3: Dashboard Integration	4 weeks	1 Frontend Dev + 1 Backend Dev	■2.5–4L
Phase 4: Personalization & Learning	4 weeks	1 ML Engineer + 1 Data Scientist	■3–5L
LLM API Costs (monthly, at scale)	Ongoing	—	■15,000–■60,000/month
Infrastructure (Cloud, Redis, DB)	Ongoing	—	■8,000–■25,000/month
Total Project (16 weeks)	4 months	4–5 team members	■11–18L one-time + infra

■ 12. Immediate Next Steps

• Step 1 — Stakeholder sign-off: Get approval from GoLo Product, Engineering, and Business leadership on this roadmap

• Step 2 — Data audit: Assign the data engineering team to audit all existing GoLo databases and document schema

• Step 3 — API key provisioning: Set up Google Cloud project, enable Vertex AI and Gemini APIs, configure billing

• Step 4 — ENV configuration: Add all required API keys and DB credentials to the backend .env file (placeholders already added)

• Step 5 — Prototype: Build a Phase 1 proof-of-concept: pull one merchant's real order data and generate one AI insight using Gemini

• Step 6 — Merchant pilot: Select 10 beta merchants to test the AI Co-Pilot and gather feedback before full rollout

• Step 7 — Legal review: Ensure DPDPA 2023 data privacy compliance for all merchant and customer data used by AI
